

Eye Liner Application

Use a thin eyeliner brush, dampen and lightly dip into the desired mineral color. Apply over your upper eyelashes and/or under your eyelashes.

You have the great minerals but you are confused how to apply and make outstanding look. We have some tips for you.

To make eyes really stand out, line them. Our shadows are go-to for lining eyes because it's easy to work with and versatile (depending on how you apply it, you can create a clean, sharp line or a soft, diffused line). Use an eyeliner brush that's thin and flat with straight or slightly angled bristles. To prevent dark specks of shadow from falling under the eyes when you line, lightly blow or tap on the brush to get rid of excess shadow. Our other trick is to dampen the brush before dip it into the shadow-in addition to ensuring that the shadow stays on the brush, this also makes the shadow last longer.
