

Foundation Application

Gently shake a small amount of Mahya Mineral Foundation Powder into the lid, for proper application you should use a quality brush. We recommend using a "real hair Kabuki brush" for full coverage or short handle flawless application face brush. All face powders provide excellent cover-up, especially for dark, under-eye areas and blemishes. Follow these three simple steps for optimum results.

Step 1. Mix the brush into the powder until all of the minerals are absorbed into the brush. If more coverage is needed, simply apply in layers. (Always remember! Less is better!).

Step 2. Tap the brush handle on the edge of the lid to remove excess powder. The powder should not be visible on the brush, this would indicate that too much powder has been used.

Step 3. Apply foundation on the skin in a circular motion, covering the entire surface of your face. Use thin layers until coverage satisfaction is achieved.

When using a moisturizer under the foundation, ensure the moisturizer has fully absorbed before applying minerals.

Step 4. Use a face mist or mineral mist after application of all your favourite Mahya minerals to set your make up if you wish, not a must though.

For Liquid Foundation: Mix with water (on lid of container), little bit of water will make foundation a creamier finish, add more water for a softer finish, (make sure you clean the lid before placing the lid back on).
