

## Nail Polish Application Guide

Color you nails!

Use a clear nail polish, dip brush into the polish, then into the desired loose mineral powder from Mahya Minerals colors and apply to your nails.

Application:

To use clear polish to create your own colors simply tap a small amount of loose powder from your jar of multi-purpose powder, mattes or blush, into a small container. Then dip the nail brush into the powder and brush over the nail. Brush repeatedly until all of the powder is nicely blended into the polish.

This will dry very quickly, and a second coat can be applied if desired. Be sure to have some gentle nail polish remover available to clean off the brush before dipping back into the bottle. In this way, your nail polish will remain clear for the next color.
